#### PREFACE

# CONGRATULATIONS ON YOUR BEAVER CHAIN LEVER BLOCK PURCHASE.

The Beaver Chain Lever Block you have chosen is a heavy duty hoist, designed to retain its operational features under normal operating conditions. In order to achieve years of satisfactory service from your Beaver Chain Lever Block a routine of careful operation, regular maintenance and lubrication should be applied.

Prior to the operation, installation or maintenance of your chain lever block, please read all the contents contained within this manual. At all times only competent and experienced personnel should operate, install or maintain this hoist. Failure to comply with the instructions contained within this manual can result in both physical and/or property damage.

In keeping with statutory requirements, and best use for your chain lever block we recommend a periodic maintenance check every 12 months via your Beaver distributor.

Our experienced and competent personnel will perform a complete service including preventative maintenance, spares and repairs service.

## COMMISSIONING

Your chain lever bock has been tested and conforms to Australian Standard AS1418.2

On completion of installation, but prior to your block being put into regular service, the following procedures should be carried out -

- 1. Check that all joints and fasteners are tight and secure.
- 2. Operate the hoist with both no load and full load, and check that the operation is smooth at all times.
- 3. Check operation of hoist brake, under light load and full load conditions.

#### OPERATING PRINCIPLE OF AN OVERLOAD PROTECTED LEVER BLOCK

The option of adding the overload protection. The unit is fitted with a slipping clutch mechanism which will prevent an overload from being lifted.

In the event of an overload trying to be lifted the clutch in the lever handle will slip, allowing the lever handle to be rotated whilst not engaging the gear box. Continual overloading of the unit must be avoided as the efficiency of the clutch may be impaired. The overload clutch is factory set and should only be adjusted or repaired by a Beaver authorised repairer. If there is any doubt as to the unit's ability to lift a load then don't. Remove the unit from service and have it checked by a Beaver authorised repairer.

## **INSTRUCTIONS**

#### PRINCIPLE AND OPERATION OF FREE CHAIN ADJUSTING SYSTEM - FREE CHAIN ADJUSTING PRINCIPLE

🔨 WARNING

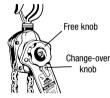

**IMPROPER** chain lever block use could result in death or serious injury. To avoid these hazards:

WARNING NEVE

**NEVER** operate the free chain adjusting device while load is applied to chain lever block.

**NEVER** touch the free knob during lifting or lowering of the load.

**NOTE:** The brake is engaged automatically during lowering or lifting of the load. Free chain adjusting is achieved by releasing the brake during no-load.

#### **STEP ACTION**

- 1. Set the change-over knob to "N". The change-over knob is located under the free knob on the hand lever .
- 2. Rotate the "Free" knob slightly in desired direction.
- 3. Pull the load chain to move the hook to the desired location.
- 4. By "setting" the change-over knob to "Up" or "Down", this will reset the brake and allow the hoist to be operated with the hand lever.

## **METHOD**

# PRINCIPLE OF LIFTING AND LOWERING OPERATION - LIFTING AND LOWERING PRINCIPLE

By setting the change-over knob to "UP" or "DOWN", and operating the lever , the female thread and the change-over pawl inside the hoist engage and the female thread rotates in either the lifting or lowering direction. The brake works instantly after the lever operation stops and holds the load.

#### LIFTING AND LOWERING

Select direction of movement and ratchet hand lever back and forth, see below:

CHAIN MOVEMENT	CHANGE-OVER KNOB	HAND LEVER ROTATION That produces movement:
Raise	"UP"	Clockwise
Lower	"DOWN"	Counter clockwise

**NOTE 1:** If hand lever movement does not produce lifting, pull down the load chain while ratcheting until slack is removed.

**NOTE 2:** PRE-LOAD is the minimum load that must be applied to the lever block before the braking system activates. The PRE-LOAD on beaver Lever block is set approximately between 2% - 4% of the WLL (Working Load Limit) of the particular lever block. eg.(250kg = 5kg-10kg), (500kg = 10kg-20kg) (800kg = 16kg-32kg), (1.6 tonne = 32kg-64kg), (3.2 tonne = 64kg-128kg), (6.3 tonne = 126kg-252kg), (9 tonne = 180kg-360kg).

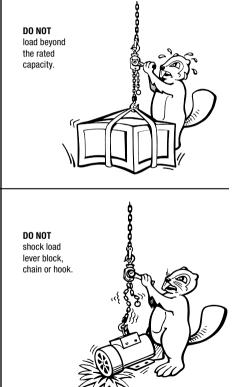

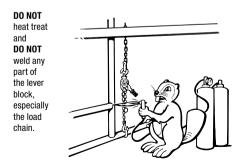

# SAFETY PROCEDURES

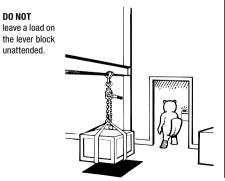

#### LEVER BLOCK

The following safety procedures should form part of the safety rules for any plant where any hoist or other lifting equipment is being used, serviced or repaired.

Any person (s) operating the hoist should read and observe the following safety instructions and the instructions in the operating section, to avoid operating hazards.

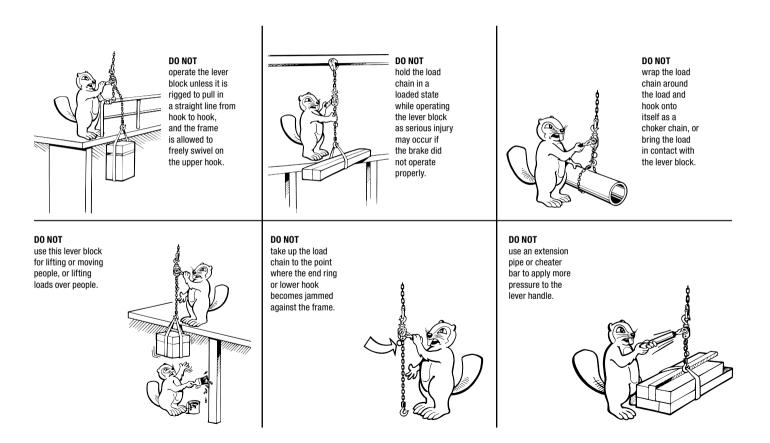

# SAFETY PROCEDURES

#### **CARE IN USE**

- 1. Always examine the hoist carefully before use your life may be at stake. Look for cracks or damage, particularly with hooks and load chain.
- 2. Keep load chain clean and oiled to prevent undue damage or wear. When in use, avoid dragging the load chain through dirt or mud.
- 3. When the hoist is used outdoors or in a corrosive environment, ensure that it is regularly and adequately lubricated.
- 4. Do not operate the hoist if you do not have a clear view of the bottom hook and the load.

If a load hook has been distorted, due to an overload on the hoist, then the hoist lifting unit will also be damaged. A hoist which has been overloaded must be withdrawn from service immediately.

## MAINTENANCE

The maintenance instructions contained in this manual are intended as a guide to the necessary procedures to be carried out by competent and experienced personnel .

Beaver Brands , do not accept responsibility either for the manner in which the instructions in this manual are observed or for any consequence there of. Your Lever Block dealer recommends two forms of maintenance to be carried out on your Lever Block periodically .

The two forms include :

- 1. VISUAL CHECK (prior to each use): Refer to table on page 7 for necessary checks. These checks can be carried out by the operator.
- **2. CERTIFIED CHECK** (conducted every 12 months): this type of inspection is to be carried out by authorised Beaver Distributor personnel only, as a complete service inclusive. This inspection is a certified check, in compliance with AS1418.2.

Important Note: Always store unit in a clean and dry area. Ensure that all repair and maintenance work is carried out by qualified personnel, using only the specified genuine parts.

POINTS OF INSPECTION	TYPE OF INSPECTIONS	OUTCOME
Hook Top/Bottom		
Deformation of hook	visual	There should be no deformation of the hook. Safety catch should close against the tip of the hook securely.
Damage to the hook	visual	There should be no crack or serious damage
Bend in the Neck of hook	visual	Hook should hand square to lifting unit or top hook or to side plates (bottom block)
Suspension Pin	visual	Should not be bent, cracked or worn
Side plates and suspension plates	visual	There should be no cracks, damage or wear
Rivets, bolts and Nuts	visual	All fasteners should be tight
Safety Catch	visual	Should close properly
Chain	visual	Should be properly lubricated and free from bends, nicks or stretch, rust and dust
Chain Guide rollers	visual	Should rotate freely and keep chain in the pockets of the chain wheel(s)
Functions		
Lifting and Lowering	Lift and lower a light load no less than the recommended Pre-Load described on pg.3	Hoist should operate smoothly and easily. Pawl should click during lifting. Lifting and lowering operations should be smooth and without any of the following defects:
Braking	Lift and lower the full working load limit not exceeding the WLL	<ol> <li>Load falls if chain is released</li> <li>Load falls while lowering</li> <li>Load slips</li> </ol>

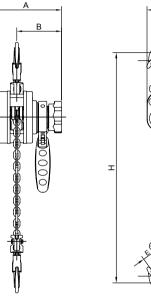

PROBLEM	CAUSE	SOLUTION
1. Chain is Jammed	Load is not being pulled in a vertical direction. Pull is at an angle greater than 60° Load swivel has ceased operating Block is dirty, or hampered with foreign matter Fall of chain is tangled Block is overloaded Brake mechanism has jammed Swivel has ceased operating	Line load to be positioned vertically Reduce angle of pull a) Unload load and de-swivel b) Replace swivel Refer to maintenance and repair section of this manual Unravel and straighten chain Load block to recommended capacity only Return to supplier for repair
2. Load is Spinning	Swivel has ceased operating Over-Spinning	a) Unload load and de-swivel b) Replace swivel Ensure that bolts and hook are properly secured
3. Block Seized	Wear and tear Poor maintenance and inspection Poor storage and handling Block is overloaded	Replace block Refer to manual for maintenance and inspection details Always store unit in a dry clean area Load block to recommend capacity only
4. Slippage of Load	Brake mechanism worn	Return to supplier for repair and testing
5. Block not Braking	Brake mechanism worn	Return to supplier for repair and testing

#### **IMPORTANT INFORMATION**

#### **1 YEAR LIMITED WARRANTY**

Beaver offers a one year limited warranty on this product.

This warranty is applicable from 1st January 2012 and supersedes all previous warranties.

Beaver Brands (A business unit of Bunzl Brands and Operations Pty Ltd) warrants to the original retail consumer and purchaser that this product will be free from defects in materials and workmanship for one year from the date the product was purchased ('the warranty period').

Beaver Brands will rectify any defect in materials or workmanship appearing within the warranty period by repairing or replacing the product. Beaver Brands will offer a refund of the purchase price if the product cannot be readily and quickly repaired or replaced. Beaver Brands reserves the right to determine whether the product contains any defects in materials or workmanship covered by this warranty.

The benefits offered by this warranty are in addition to your rights and remedies that may apply at law. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

#### HOW TO MAKE A WARRANTY CLAIM

To make a claim under this warranty, the product or part must be returned for examination to an authorised service centre nominated by Beaver Brands together with proof of purchase such as the dated sales receipt and an explanation of the problem to be rectified. An authorised service centre can be identified by contacting Beaver Brands at the address or telephone number provided.

Any costs incurred in making a claim under this warranty or returning the product to an authorised service centre is to be borne by the person making the claim unless otherwise agreed by Beaver Brands. If Beaver Brands determines the product contains a defect in materials or workmanship that is covered by this warranty then Beaver Brands will bear the cost of returning the repaired product or replacement product to the person making the claim. If Beaver Brands determines the product does not contain a defect in materials or workmanship covered by this warranty then the cost of returning the product will be at the expense of the person making the claim.

#### EXCLUSIONS

This warranty does not apply to any defect caused by, or associated with misuse, abuse, lack of maintenance, negligence or accidents, repairs or alterations not authorised by Beaver.
