

## BH02020-QB CONFINED SPACE HARNESS

Full body harness c/w front & rear fall arrest attachment points, rear attachment D ring with dorsal extension strap & fall arrest indicator, confined space recovery loops, suspension trauma straps, fully openable slide through & quick connect buckles.

### Material and Construction

- 45mm Black and Gold webbing
- Zinc plated mild steel rear D Ring
- Zinc plated mild steel 2 bar 3 bar buckles to shoulders
- Efficient high capacity (25kN) Quick Connect Buckles to chest and legs
- Colour fast webbing
- Labelling fully protected by Clear PVC

### Applications and Usage

**Fall Arrest** - Use in conjunction with a shock absorbing lanyard or inertia reel device attached to the dorsal extension, rear D ring or front loops.

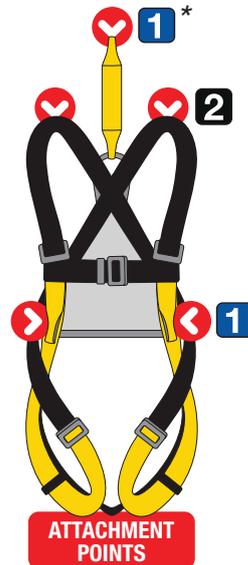

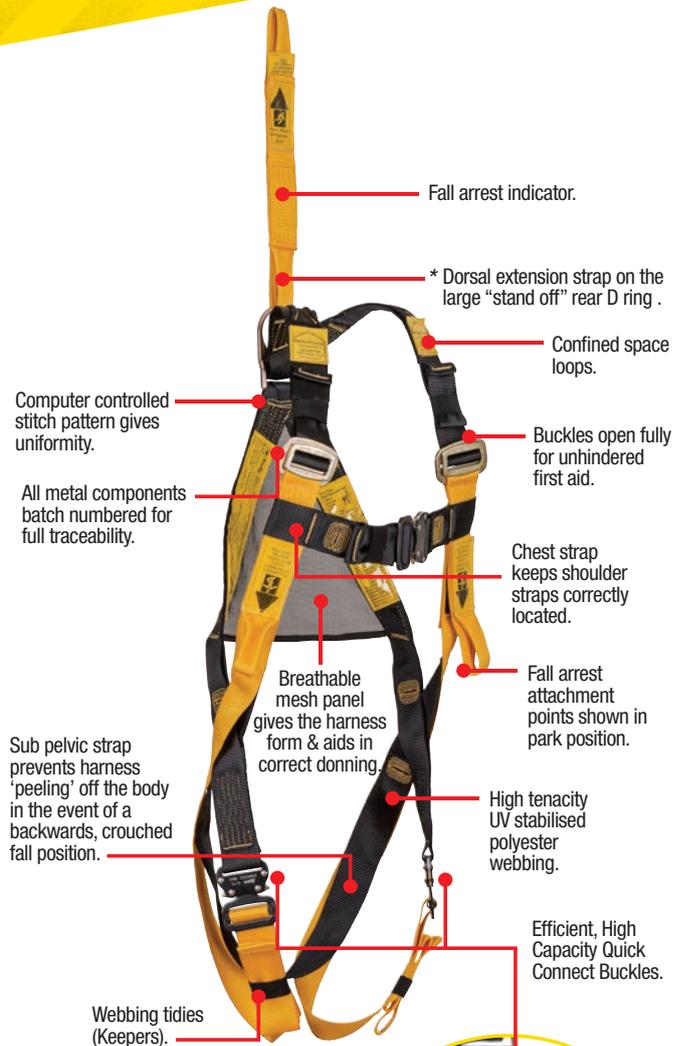

**Restraint Technique** - Use in conjunction with a shock absorbing lanyard to dorsal extension, rear D ring, or front loops to limit access to fall situations.

**Recovery & Rescue** - Use both front loops connected together.

**Confined Space** - Rescue & Recovery using confined space loops.

### Testing and Quality Control

- AS/NZS 1891.1:2007 Certified Product
- 100% visually inspected and proof loaded
- All raw materials conform to relevant safety standards
- Batch tested to dynamic requirements AS1891.1:2007

\* Maximum recommended lanyard length 1.6m, when using dorsal extension strap.

## Features

- Manufactured from a light weight, comfortable and durable webbing suitable for the harsh Australian work environment.
- Front and Rear fall arrest attachment points consisting of large “stand off” D Ring to rear and convenient frontal loops to facilitate easy attachment.
- Fully adjustable leg, shoulder and chest straps provide secure fit and optimal support.
- Rear breathable mesh panel allows the harness to take and hold shape to assist donning.
- Clear and protected instructional labelling makes understanding of attachment point applications easy. Labelling also assists with clear donning instructions.
- Forged buckles and rear D Ring improve safety by providing strength and better protection over stamped alternatives. Webbing “creep” is also minimised under normal working conditions.
- Sub-pelvic strap prevents harness “peeling off” in the event of a fall (providing enhanced safety) and assists with distributing the forces in the event of a fall.
- Dorsal extension strap on large “standoff” D ring allows for visual connection of fall arrest device. Dorsal extension also moves connection away from rear of head - an added safety feature. Built in Fall Indicator identifies quickly if harness has been subjected to a fall.  
*Note: When using Dorsal extension maximum Shock Absorbing Lanyard length should be 1.6m.*
- Openable slide through buckles on shoulder straps afford easy access for first aid.
- Confined space recovery loops on shoulders provided for access and rescue when working in confined spaces.
- ALL harnesses are proof loaded and given dedicated final inspection prior to release.
- Efficient Quick Connect Buckles to chest and legs provides for faster donning.
- Anti-Slide pin in Quick Connect Buckle reduces webbing creep.
- Inclusion of Suspension Trauma Straps provides the start of a safety platform for rescue plan.

**Code:** BH02020-QB

**Description:** Full body harness c/w front & rear fall arrest attachment points, rear attachment D ring with dorsal extension strap & fall arrest indicator, confined space recovery loops, suspension trauma straps, fully openable slide through & quick connect buckles.

**Weight:** 1.2kg

**Package Dimensions:**

**Barcode Number:**

**Accessories:** BA0303 Telephone Holder, BA00014 Tool Lanyard, BA0300 Harness storage bag, BA00005A Comfort Shoulder Pads, BA00024 Trauma Relief Straps, BA0302 Bolt Bag, BA0301 Multi Tool Bag, BA00004LA Comfort Leg Pads (pair)  
*(Tool Loops & Clips are available upon request.)*
