332080N

AdBlue® Transfer Rotary Drum Pump

The new 332080N AdBlue® transfer rotary drum pump represents an innovative, exclusive design and is capable of transferring AdBlue® at flow rates of 380mL per revolution or up to 38 L/min. Easy to install and remove from the drum the 332080N is supplied complete with 2.5 metres of clear delivery hose, stainless steel spout with air tight cap and a Trisure drum bung adaptor.

Weighing only 2.1kg (3.2kg with hose), the 332080N AdBlue® transfer rotary drum pump is completely portable and versatile for AdBlue® transfer at the depot or in the field. Also suitable for dispensing water and antifreeze.

The 332080N is the new benchmark in AdBlue® transfer due to its suction capacity, self-priming ability and easy, immediate dispensing.

Sturdy stainless steel and polypropylene construction with acetalic resin vanes ensures 100% compatibility with AdBlue® and the wear resistant materials together with manufacturing tolerances guarantee a long service life when used in accordance with recommendations and maintenance advice.

Note that due to the crystallisation tendency of AdBlue® when in contact with air, the 332080N must be thoroughly washed out with water or the AdBlue® will crystallise thereby seizing the internals of the pump and will therefore not be covered by the manufacturer's warranty.

Designed and made in Italy, the new 332080N AdBlue® transfer rotary drum pump has been produced to the highest quality with the expectations of the professional user in mind.

PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

Flow rates of 380ml per rotation or up to 38 L/min

Stainless steel, polypropylene with 30% fibreglass construction

Acetalic resin vanes

3-piece downtube suits 20L, 60L and 205L drums

Operating temperature from -5°C to +45°C

Made in Italy

100% AdBlue® compatibility

Self-priming and immediate dispensing

2.5m clear delivery hose complete with stainless steel spout

Complete with air tight spout cap

Trisure drum bung adaptor

Light weight at just 2.1kg (3.2kg with hose)

Also suitable for dispensing water and antifreeze

Must be rinsed thoroughly with water after each use
