

DH180240

240V 205L/180kg Drum Heater

May 2019

The DH180240 240V silicon rubber drum heater available from Alemlube is an extremely effective and durable device that can save you time by heating stored viscous fluids in 205L oil drums to a pourable temperature and also valuable for use on 180kg grease drums.

Manufactured from fibreglass reinforced silicon, the DH180240 is resistant to chemicals, tough, long lasting, easy to keep clean and conveniently rolls up after use, taking up very little space. A real benefit when shipping is important.

Measuring just 125mm in width, the 240V DH180240 silicon rubber drum heater is supplied standard with a 1.4m power cord and standard three-pin plug.

The vulcanised silicon rubber construction is accredited with an IP56 rating (according to International Standard IEC 60529) for protection against moisture and dust and is also resistant to ozone, fungus and radiation.

Please note that the total wattage (number of heaters) and the material being heated inside the drum must be considered when determining the actual temperature to which that specific fluid can be heated.

SPECIFICATIONS, FEATURES AND BENEFITS

- Reliable and built to last
- Suits 205L oil drums & 180kg grease drums
- Heats viscous fluids to a pourable temperature
- 240V, 1000W power
- Maximum operating temperature of 218°C
- Built in temperature control for safety
- B200 type thermostat
- Surface grounded electrically with internal metal screen
- Dimensions of 1740mm long x 125mm wide
- 1400mm long power cord & 3-pin plug
- Resistant to chemicals and weather conditions
- IP56 moisture and dust ingress protection rating
- Easy to clean
- Rolls up after use for convenient storage
